

Name of Client:	Hemp Seeds Market
Sample Name:	Pre-grow biomass
Date of Analysis	7/31/2019
Batch Number:	073119-2

Results		
	wt %	mg/g
Cannabidiolic acid - CBDA	14.08%	140.8
Cannabigerol - CBG	0.06%	0.6
Cannabidiol - CBD	2.94%	29.4
Cannabinol - CBN	ND	ND
Delta-9-Tetrahydrocannabinol - d9-THC	0.29%	2.9
Tetrahydrocannabinolic acid - THCA	0.42%	4.2

CBD and THC Equivalents		
	wt %	mg/g
CBD Equivalents	15.29%	152.9
THC Equivalents	0.66%	6.6

CBD:THC Ratio	23:1
----------------------	-------------

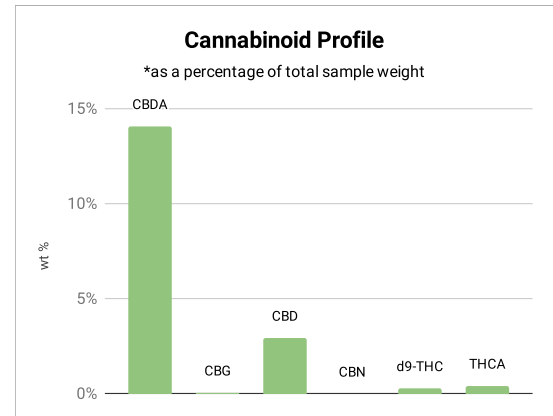

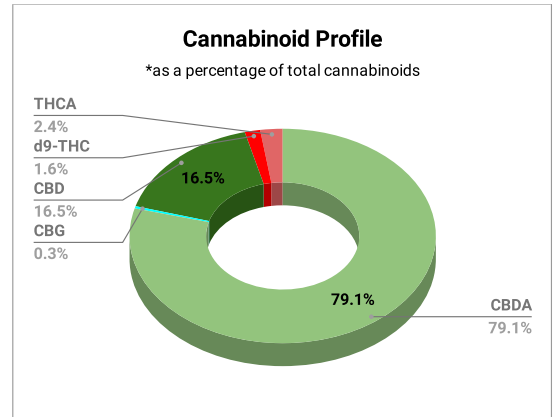

CBD and THC Equivalents Explained

CBD Equivalents = 0.877*CBDA + CBD
 THC Equivalents = 0.877*THCA + d9-THC

Upon heating CBDA and THCA transform into CBD and d9-THC, respectively. This process is called decarboxylation because a carboxyl group is lost in the process. It is standard to calculate the actual weight percent/concentration of both CBD and THC as the weight percent/concentration assuming all of the CBDA and THCA are decarboxylated.

Details of Testing

High performance liquid chromatography (HPLC) was used to determine concentrations of CBD, CBG, CBDA, CBN, d9-THC, and THCA. Any result reported back as ND (not detected) is below our lower limit of detection. Our lower limit of detection is 0.005%. Results are reported on a dry weight basis.
